Tour Guides at Memorial Sites and Holocaust Museums Aug 26 2022 In this volume, contributors reflect on how to teach and mediate difficult history from the perspectives of guides. Too often, their activities are undervalued and taken for granted. Guides represent an important, often forgotten group of educators. This volume takes a global view on guiding at memorial sites and museums in Europe, North America, and South Africa. The contributors to this volume show from different research traditions that it is worth understanding more about the guides' personal interests, their motivations, and their concept of guiding. Authors apply methodologies from the social sciences to describe the guides' point of view. Complementing the various approaches in tour guide research, a detailed linguistic analysis sheds light on a survivor's testimony echoed in the guides' language. The studies gathered in this volume open up an orientation for further approaches to tour guiding based on and centered around "authentic" materials from guides.

Excel 2016 for Health Services Management Statistics Jun 11 2021 This book shows the capabilities of Microsoft Excel in teaching health services management statistics effectively. Similar to the previously published Excel 2013 for Health Services Management Statistics, this book is a step-by-step exercise-driven guide for students and practitioners who need to master Excel to solve practical health service management problems. If understanding statistics isn't your strongest suit, you are not especially mathematically-inclined, or if you are wary of computers, this is the right book for you. Excel, a widely available computer program for students and managers, is also an effective teaching and learning tool for quantitative analyses in health service courses. Its powerful computational ability and graphical functions make learning statistics much easier than in years past. However, Excel 2016 for Health Services Management Statistics: A Guide to Solving Practical Problems is the first book to capitalize on these improvements by teaching students and managers how to apply Excel to statistical techniques necessary in their courses and work. Each chapter explains statistical formulas and directs the reader to use Excel commands to solve specific, easy-to-understand health service management problems. Practice problems are provided at the end of each chapter with their solutions in an appendix. Separately, there is a full Practice Test (with answers in an Appendix) that allows readers to test what they have learned.
