Computer Science and Convergence is proceedings of the 3rd FTRA International Conference on Computer Science and its Applications (CSA-11) and The 2011 FTRA World Convergence Conference (FTRA WCC 2011). The topics of CSA and WCC cover the current hot topics satisfying the world-wide ever-changing needs. CSA-11 will be the most comprehensive conference focused on the various aspects of advances in computer science and its applications and will provide an opportunity for academic and industry professionals to discuss the latest issues and progress in the area of CSA. In addition, the conference will publish high quality papers which are closely related to the various theories and practical applications in CSA. Furthermore, we expect that the conference and its publications will be a trigger for

further related research and technology improvements in this important subject. The main scope of CSA-11 is as follows: - Mobile and ubiquitous computing - Dependable, reliable and autonomic computing - Security and trust management - Multimedia systems and services - Networking and communications - Database and data mining - Game and software engineering - Grid, cloud and scalable computing - Embedded system and software - Artificial intelligence - Distributed and parallel algorithms - Web and internet computing - IT policy and business management WCC-11 is a major conference for scientists, engineers, and practitioners throughout the world to present the latest research, results, ideas, developments and applications in all areas of convergence technologies. The main scope of WCC-11 is as follows: - Cryptography and Security for Converged environments - Wireless sensor network for Converged environments - Multimedia for Converged environments - Advanced Vehicular Communications Technology for Converged environments - Human centric computing, P2P, Grid and Cloud computing for Converged environments - U-Healthcare for Converged environments - Strategic Security Management for Industrial Technology - Advances in Artificial Intelligence and Surveillance Systems This work covers the subject areas of materials properties, metal casting processes and equipment, forming and shaping processes and equipment, material removal processes and machines, joining processes and equipment, surface technology, common aspects of manufacturing, manufacturing in a competitive environment and other related topics. This book is sure to give readers new insights into the topics covered. Parental drug use affects children at every stage of their lives, from before birth and well into their adult lives The aim of this report is to shed light on an invisible population: children and adolescents living in families where at least one parent uses drugs. This focus on children exposed to parental dependence on drugs and alcohol implies helping them and their families to overcome dependence and its consequences. Parental drug use impacts children at every stage of their lives, from before birth and well into their adult lives. However, until now, this situation has received very little attention. This report looks at children growing up in families affected by drug and alcohol dependence, as well as the services, programmes and practices that help protect childhood and ensure children's needs are met, while at the same time addressing the needs of parents. This project is part of the Pompidou Group's mission of integrating human rights into drug policy. It was proposed in response to the Council of Europe's invitation to the Pompidou Group Secretariat to participate in the Inter-Secretariat Task Force on Children's Rights and to contribute to the discussions on the themes which should appear in the new Council of Europe Strategy on the Rights of the Child (2022-2027). The contents, conclusions and recommendations presented in the report contribute to the growing

knowledge and interest in this topic and serve as a practical reference for the identification of promising practices and international partners. Far from being a conclusion, this report is the first step in a joint effort to give visibility to children of parents who use drugs and a tool to foster cooperation and dialogue that will continue in 2022 with Phase III of the project. Bisphenols are a group of abundant environmental chemicals. Many bisphenol derivatives, including bisphenol A (BPA), are used to manufacture plastics, epoxy resins, and other products. Thus, human exposure to bisphenols is inevitable. BPA may cause reproductive, developmental, and systemic toxic effects and there are questions about its potential impact, particularly on children's health and the environment. Due to these concerns, new alternatives are now being used; however, these alternatives also have a bisphenol chemical structure and may lead to toxicity in humans. This book focuses on the toxicity mechanisms, pathological conditions, detection methods, and regulations of bisphenol derivatives. It presents the latest findings on the toxic effects of BPA, diseases that may be related to bisphenol exposure, and the regulations of the US Food and Drug Administration, European Food Safety Authority, and European Union. In the debate over the treatment of China in trade remedy investigations, this book focuses exclusively on anti-subsidy law. As such, it brings a long neglected and often underestimated area of international trade law to the fore. Exploring the delicate relations between the WTO, the EU and China, it focuses on the current legal framework for the use of alternative benchmarks in anti-subsidy law and analyses the consequences that arise from its practical application in investigations against China. Scrutinizing recent developments in WTO anti-subsidy law, in particular the adoption of country-specific rules in accession protocols, the book reveals the shortcomings of the current approach and argues for fundamental reforms. Accordingly, the book provides academics and practitioners alike with vital insights into the legal evolution and practical application of alternative benchmark methodologies in the context of WTO and EU anti-subsidy law, while also putting forward a critical analysis of the status quo. Commentary Policies and laws Responding to drug problems in Europe -- an overview Cannabis Amphetamines, ecstasy, hallucinogens, GHB and ketamine Cocaine and crack cocaine Opioid use and drug injection Drug-related infectious diseases and drug-related deaths New drugs and emerging trends. This volume celebrates the twentieth anniversary of CLEF - the Cross-Language Evaluation Forum for the first ten years, and the Conference and Labs of the Evaluation Forum since - and traces its evolution over these first two decades. CLEF's main mission is to promote research, innovation and development of information retrieval (IR) systems by anticipating trends in information management in order to stimulate advances in the field of IR system experimentation and evaluation. The book is divided into six parts.

Parts I and II provide background and context, with the first part explaining what is meant by experimental evaluation and the underlying theory, and describing how this has been interpreted in CLEF and in other internationally recognized evaluation initiatives. Part II presents research architectures and infrastructures that have been developed to manage experimental data and to provide evaluation services in CLEF and elsewhere. Parts III, IV and V represent the core of the book, presenting some of the most significant evaluation activities in CLEF, ranging from the early multilingual text processing exercises to the later, more sophisticated experiments on multimodal collections in diverse genres and media. In all cases, the focus is not only on describing “what has been achieved”, but above all on “what has been learnt”. The final part examines the impact CLEF has had on the research world and discusses current and future challenges, both academic and industrial, including the relevance of IR benchmarking in industrial settings. Mainly intended for researchers in academia and industry, it also offers useful insights and tips for practitioners in industry working on the evaluation and performance issues of IR tools, and graduate students specializing in information retrieval. In recent years, the non-medical use of prescription drugs (NMUPD) has caused increasing public concern around the globe. Women constitute a special risk category for NMUPD and understanding gender as it relates to this phenomenon is now a critical requirement for effective policy and practice. Intended primarily for policy makers and researchers, this Pompidou Group publication aims to explore gender specificities in terms of the use and misuse of prescription drugs in Europe and the Mediterranean region. Using secondary sources, it also seeks to identify gaps in the data available in the area covered and to make recommendations for further research, coherent policy development and effective, gender-sensitive practice. This publication is an initial attempt to map this emerging phenomenon and to identify lacunae and avenues for further investigation. It constitutes an important resource for those interested in the interaction between gender and drug use. It is not intended to model or quantify the impacts of each policy option over time but instead to examine the means by which each influences behavior and the demand for and supply of energy- and emissions-saving technology, particularly in the modes of transportation with the greatest effect on the sector's consumption of petroleum and emissions of GHGs. In choosing among policies, elected officials must take into account many factors that could not be examined in this study, such as the full range of safety, economic, and environmental implications of their choices; therefore, the report does not recommend a specific suite of policies to pursue. Instead, the emphasis is on assessing each policy approach with regard to its applicability across transportation modes and its ability to affect the total amount of energy-intensive transportation activity, the efficiency of transportation vehicles, and GHG emissions characteristics of the sector's energy supply. *Drugs—Advances in Research and Application / 2012 Edition* is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Drugs. The

editors have built *Drugs—Advances in Research and Application: 2012 Edition* on the vast information databases of ScholarlyNews.™ You can expect the information about Drugs in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of *Drugs—Advances in Research and Application: 2012 Edition* has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>. As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz – rich cars, poor quality. There's only one Saturn you should buy. Toyota – enough apologies: "when you mess up, 'fess up." As lifestyles in personal and public spheres become more fast-paced and hectic, the need for reliable mobile technologies becomes increasingly important. Insights into the various impacts of mobile applications pave the way for future advances and developments in communication and interaction. *Critical Socio-Technical Issues Surrounding Mobile Computing* is a pivotal reference source for research-based perspectives on the use and application of mobile technology in modern society. Featuring extensive research on a variety of topics relating to the social, technical, and behavioral perspectives of mobile applications, this book is an essential reference source for mobile application developers, instructors, practitioners, and students interested in current research on the impact of mobile devices on individuals and society as a whole. Volume is indexed by Thomson Reuters CPCI-S (WoS). The purpose of this special collection was to strengthen national academic exchanges and cooperation in the field, to promote the rapid development of machinery, materials science and engineering applications, to improve China's machinery, materials science and engineering in the sense of academic status and international influence and to play an active role in reducing the distance between domestic and world-class norms. In accomplishing this, the present book succeeds admirably. This book constitutes the refereed proceedings of the 17 International Conference on Intelligent Data Engineering and Automated Learning, IDEAL 2016, held in Yangzhou, China, in October 2016. The 68 full papers presented were carefully reviewed and selected from 115 submissions. They provide a valuable and timely sample of latest research outcomes in data engineering and automated learning ranging from methodologies, frameworks, and techniques to applications including various topics

such as evolutionary algorithms; deep learning; neural networks; probabilistic modeling; particle swarm intelligence; big data analysis; applications in regression, classification, clustering, medical and biological modeling and predication; text processing and image analysis. User Experience (UX) and User Experience Design (UXD) challenge existing usability models by changing the emphasis from task and usage to a broader understanding of experience and purpose. UX techniques are gaining popularity across a range of current digital media design and development areas. Today's designers need to create work that will impact positively on everyone who is exposed to it, as work is delivered across diverse digital platforms accessible to huge populations. It may be passive and immutable or interactive and dynamic, but the success of the design will depend largely on how well the user experience is constructed. *Basics Interactive Design 02: User Experience Design* introduces an approach to graphic design that puts human experience at the forefront of the design process. Throughout the book, Gavin Allanwood and Peter Beare show how design skills can be improved by undertaking practical exercises and reviewing the work, style and motivations of leading practitioners. These volumes comprise papers, on the topic of [Materials Processing Technology], selected from the second International Conference on Advances in Materials and Manufacturing (ICAMMP 2011) held on the 16-18th December 2011 in Guilin, China. The 469 peer-reviewed papers are grouped into the chapters: 1: Advanced Engineering Materials, 2: Surface Engineering/Coatings, 3: Materials Forming, Machining and Joining, 4: Laser Processing, 5: Powder Metallurgy and Plastic Deformation, 6: Friction and Wear, 7: Waste-to-Energy, Waste Management and Waste Disposal, 8: CAD/CAE/CAM, 9: Product Design and Development, 10: Other Related Topics. There is a growing need for high-throughput separations in food and environmental research that are able to cope with the analysis of a large number of compounds in very complex matrices. Whereas the most common approach for solving many analytical problems has often been high-performance liquid chromatography (HPLC), the recent use of fast or ultra-fast chromatographic methods for environmental and food analysis has increased the overall sample throughput and laboratory efficiency without loss (and even with an improvement) in the resolution obtained by conventional HPLC systems. This book brings together researchers at the top of their field from across the world to discuss and analyze recent advances in fast liquid chromatography-mass spectrometry (LC-MS) methods in food and environmental analysis. First, the most novel approaches to achieve fast and ultra-fast methods as well as the use of alternative and complementary stationary phases are described. Then, recent advances in fast LC-MS methods are addressed, focusing on novel treatment procedures coupled with LC-MS, new ionization sources, high-resolution mass spectrometry, and the problematic confirmation and quantification aspects in mass spectrometry. Finally, relevant LC-MS applications in food and environmental analysis such as the analysis of pesticides, mycotoxins, food packaging contaminants, perfluorinated compounds and polyphenolic compounds are described.

The scope of the book is intentionally broad and is aimed at worldwide analytical laboratories working in food and environmental applications as well as researchers in universities worldwide. Contents: Fast Liquid Chromatography Advances:UHPLC Separations Using Sub-2 μm Particle Size Columns (Julie Schappler, Jean-Luc Veuthey and Davy Guillarme)Core-Shell Column Technology in Fast Liquid Chromatography (Oscar Núñez and Héctor Gallart-Ayala)Monolithic Columns in Fast Liquid Chromatography (Takeshi Hara, Oscar Núñez, Tohru Ikegami and Nobuo Tanaka)High-Temperature Liquid Chromatography (Thorsten Teutenberg)Hydrophilic Interaction Liquid Chromatography (HILIC) and Perfluorinated Stationary Phases (Cristina C Jacob, Héctor Gallart-Ayala and Gonçalo Gamboa da Costa)Advances in Fast Liquid Chromatography–Mass Spectrometry Methods:On-Line Sample Pre-Treatment Procedures Applied to LC–MS (Tony Edge and Joseph Herman)Ambient Mass Spectrometry: Food and Environmental Applications (Tiina J Kauppila and Anu Vaikkinen)Liquid Chromatography–High-Resolution Mass Spectrometry in Environmental and Food Analysis (Paolo Lucci and Claudia P B Martins)Liquid Chromatography–Mass Spectrometry: Quantification and Confirmation Aspects (Jaume Aceña, Daniel Rivas, Bozo Zonja, Sandra Pérez and Damià Barceló)Relevant LC–MS Applications in Food and Environmental Analysis:Multiresidue Analysis of Pesticides: LC–MS/MS versus LC–HRMS (Juan V Sancho and María Ibáñez)Food-Packaging Contaminants (Silvia Lacorte, Montse Cortina, Albert Guart and Antonio Borrell)Liquid Chromatography–Mass Spectrometry for the Analysis of Perfluorinated Compounds in Water Samples (Marianna Rusconi, Stefano Polesello and Sara Valsecchi)Determination of Phenolic Compounds in Food Matrices: Application to Characterization and Authentication (Javier Saurina and Sonia Sentellas)Liquid Chromatography–Mass Spectrometric Analysis of Mycotoxins in Food (Veronica M T Lattanzio and Angelo Visconti) Readership: Scientists or students in mass spectrometry, chemists, biologists, and analysts. Keywords:Mass Spectrometry;Fast Liquid Chromatography;Food Analysis;Environmental Analysis Resource added for the Nursing-Associate Degree 105431, Practical Nursing 315431, and Nursing Assistant 305431 programs. This volume gathers the latest advances, innovations, and applications in the field of pavement technology, presented at the 12th International Conference in Road and Airfield Pavement Technology (ICPT), hosted by the University of Moratuwa, Sri Lanka, and held on July 14-16, 2021. It covers topics such as pavement design, evaluation and construction, pavement materials characterization, sustainability in pavement engineering, pavement maintenance and rehabilitation techniques, pavement management systems and financing, transportation safety, law and enforcement related to pavement engineering, pavement drainage and erosion control, GIS applications, quarry material assessment, pavement instrumentation, IT and AI applications in pavement. Featuring peer-reviewed contributions by leading international researchers and engineers, the book is a timely and highly relevant resource for materials scientists and engineers interested in pavement engineering. This book constitutes the refereed

proceedings of the 18th Conference on Computer Networks, CN 2011, held in Ustron, Poland, in June 2011. The 50 revised full papers presented were carefully reviewed and selected for inclusion in the book. The papers can be divided into the following subject groups: molecular networks; network issues related to nano and quantum technology; new technologies related to the Computer Networks; fundamentals of computer networks architecture and programming; internet networks; data security in distributed systems; industrial computer networks; applications of computer networks. Explorations of design, use, and reuse of information technology in diverse historical and cultural contexts. Professionals working in addiction care in both Belgium and other European countries have identified a discrepancy between the prevalence of problem substance use among people with a migration background, and the presence of people with a migration background in treatment facilities. However, little research is currently available on this topic. This study attempts to fill the knowledge gap in existing research by exploring the patterns of substance use, expectations and treatment needs of people with a migration background in four Belgian target groups (the Turkish community in Ghent; the Eastern European communities in Ghent; the Congolese community in Brussels; and asylum applicants, refugees and undocumented migrants). Substance users with a migration background can be particularly difficult for researchers to reach, so community researchers were recruited to interview substance users from within their own network. Over 200 people were interviewed. The project was carried out in close collaboration with the respective communities and with stakeholders in addiction care. This book presents the findings of the study, together with recommendations for health care policy and the practice of addiction care. It also details the explorative and qualitative community-based participatory research design (CBPR) that was used to facilitate the study. All models with 1.9 litre and 2.0 litre diesel engines. Also covers Nissan Primastar. Does not cover specialist body conversions. Diesel: 1.9 litre (1870cc) & 2.0 litre (1995cc). Does not cover petrol engines or 2.5 litre diesel engine. Cannabis is globally the most commonly used psychoactive substance under international control. In 2013 an estimated 181.8 million people aged 15-64 years used cannabis for nonmedical purposes globally (UNODC 2015). There is an increasing demand for treatment for cannabis-use disorders and associated health conditions in high- and middle-income countries. This report focuses on nonmedical use of cannabis building on contributions from a broad range of experts and researchers from different parts of the world. It aims to present current knowledge on the impact of nonmedical cannabis use on health from its impact on brain development to its role in respiratory diseases. The potential medical utility of cannabis - including the pharmacology toxicology and possible therapeutic applications of the cannabis plant - is outside the scope of this report. Identifying effective approaches to creating coherent policies regarding licit and illicit drugs has been the priority of the Pompidou Group during its 2010-14 work programme. Over the years, research has evolved in this field as demonstrated in the group's publications: From a policy on

illegal drugs to a policy on psychoactive substances in 2008 and Towards an integrated policy on psychoactive substances: a theoretical and empirical analysis in 2010, and then Reflections on the concept of coherency for a policy on psychoactive substances and beyond in 2012. This last publication attempted to put into perspective the salient points of what may be termed a coherent policy on psychoactive substances. It proposed six indicators, around which the concept of coherency was developed: conceptualisation, policy context, legislative and regulatory frameworks, strategic frameworks, responses/interventions and structures and resources. The initial target for the use of these six indicators is that all drugs policies should be in line with the concept of "well-being". At the very least, they should not contradict each other and at best they should be in harmony. On this basis, in 2013 and 2014, researchers refined these indicators and tested them in their countries, namely Croatia, the Czech Republic, Hungary, Ireland, Israel, Italy, Norway and Portugal to verify whether they provided a valid tool to measure the effectiveness and efficiency of a coherent policy on psychoactive substances. The results appear in this publication and indicate that such markers may be indeed used as a basis for discussion on the issue of coherence and in some cases as a means to better implement coherent policies in respect to psychoactive substances, and also possibly policies that address other forms of addictive behaviour. The World Drug Report provides a comprehensive overview of recent developments in the world's illicit drug markets. Chapter one of the World Drug Report 2016 provides a global overview of the latest statistics, trends and developments with respect to opiates, cocaine, cannabis and synthetic drugs, ranging from production to trafficking as well as consumption and the health consequences of drug use. Chapter two utilizes the Sustainable Development Goals framework to examine the interplay between the drugs phenomenon and the broader development context. Volume is indexed by Thomson Reuters CPCI-S (WoS). The objective of ICMST 2011 was to provide a platform where researchers, engineers, academics and industrial professionals from all over the world could present their research results and discuss developments in Manufacturing Science and Technology. This conference provided opportunities for delegates to exchange new ideas and applications face-to-face, to establish business or research contacts and to find global partners for future collaboration. As cities are rapidly expanding and encroaching into agricultural and natural areas, a question of primary concern is how this expansion affects surrounding agriculture and natural landscapes. This book presents a wide spectrum of both theoretical and empirical approaches to simulation and assessment of landscape dynamics. The first part presents state-of-the-art modelling approaches pertaining to land-use changes entailed by the urban sprawl, at different spatial resolutions and temporal time scales. The second part is dedicated to case studies of the effects and consequences of the emerging urban-agriculture open space patterns. This book is a printed edition of the Special Issue "Ecological Monitoring, Assessment, and Management in Freshwater Systems" that was published in Water
