This book discusses recent progress in endohedral fullerenes – their production and separation techniques, as well as their characterization and properties. Furthermore, the book delves into the all-important issue of stability by investigating electron transfer between the encapsulated metal species and the carbon cage. It also reviews spin-based phenomena caused by the shielding of endohedral spin by the fullerene, and analyzes formation of the spin states by charge transfer as studied by electron spin resonance. Tuning of charge states of endohedral species and of spin states of both the cage and the cluster are explained. Finally, the book considers the recent discovery of magnetism in some endohedral fullerenes, and the potential for quantum computing. Praise for the first edition of Research into Practice and Research Methods for Nurses and the Caring Professions: These books provide a good introduction for the uninitiated to reading and doing research. Abbott and Sapsford provide a clearly written and accessible introduction to social research ... One of their aims is to 'de-mystify' research, and in this they succeed admirably... After reading the text and the articles in the reader, and working through the various research exercises, readers should have a clear appreciation of how to evaluate other people's research and how to begin their own. -David Field, Journal of Palliative Medicine This book, now substantially revised in its second edition, is about the appreciation, evaluation and conduct of social research. Aimed at nurses, social workers, community workers and others in the caring professions, the book is particularly focused on research which evaluates and contributes to professional practice. The authors have provided many short, practical exercises in the text, and the examples are drawn mostly from projects carried out by one or two people rather than large research teams. The clear, accessible style will make this the ideal introductory text for those undertaking or studying research for the first time. The book may be used in conjunction with Research into Practice (Open University Press), a reader of useful examples selected by the same authors. This edition of ICD-O, the standard tool for coding diagnoses of neoplasms in tumour and cancer registrars and in pathology laboratories, has been developed by a working party convened by the International Agency for Research on Cancer / WHO. ICD-O is a dual classification with coding systems for both topography and morphology. The book has five main sections. The first provides general instructions for using the coding systems and gives rules for their implementation in tumour registries and pathology laboratories. Section two includes the numerical list of topography codes, which remain unchanged from the previous edition. The numerical list of morphology codes is presented in the next section, which introduces several new terms and includes considerable revisions of the non-Hodgkin lymphoma and leukaemia sections, based on the WHO Classification of Hematopoietic and Lymphoid Diseases. The five-digit morphology codes allow identification of a tumour or cell type by histology, behaviour, and grade. Revisions in the morphology section were made in consultation with a large number of experts and were finalised after field-testing in cancer registries around the world. The alphabetical index gives codes for both topography and morphology and includes selected tumour-like lesions and conditions. A guide to differences in morphology codes between the second and third editions is provided in the final section, which includes lists of all new code numbers, new terms and synonyms added to existing code definitions, terms that changed morphology code, terms for conditions now considered malignant, deleted terms, and terms that changed behaviour code.
