The Nordic Region and the 2030 Agenda Jul 15 2022 Available online: <https://pub.norden.org/nord2021-042/> How are the Nordic countries, and the Faroe Islands, Greenland, and Åland working on the 2030 Agenda and the 17 SDGs? This review provides the answers, with an emphasis on the national political structures for implementing the 2030 Agenda, i.e. action plans with national and international prioritisations, along with follow-up work and areas for improvement. The aim of the review is to create a factually based overview of the Nordic countries' work on the 2030 Agenda, where the relevant basic information can be found easily, with links to websites and other material, for each of the Nordic countries.

GFCM 2030 Strategy for sustainable fisheries and aquaculture in the Mediterranean and the Black Sea Apr 19 2020 The GFCM 2030 Strategy for sustainable fisheries and aquaculture in the Mediterranean and Black Sea offers a common vision and guiding principles to achieve sustainable fisheries and aquaculture in the region, federating efforts to deliver on national, regional and global commitments. Building upon the progress made and concerted action between all stakeholders, it addresses the social, economic and environmental aspects of sustainability in order to build resilience to respond to global challenges. The GFCM 2030 Strategy upholds the heritage of fisheries and aquaculture as pillars for the livelihoods of coastal communities, championing a productive and sustainable food system that contributes to thriving economies and healthy ecosystems. It is articulated in five distinct targets that each contribute to this overarching vision for sustainability: Target 1 focuses on healthy seas and productive fisheries; Target 2 aims to ensure a level playing field to eradicate all illegal, unreported and unregulated fishing; Target 3 helps realise the potential of a growing aquaculture sector; Target 4 supports livelihoods through decent employment and fishers engagement; and Target 5 fosters capacity development through technical cooperation and efficient partnerships across the region. The GFCM 2030 Strategy addresses regional priorities while taking into account local needs and specificities through a subregional approach. Covering a ten-year span, the GFCM 2030 Strategy is aligned with a global agenda. The successful achievement of its targets relies on the commitment of the GFCM Membership in adopting and implementing relevant decisions and in supporting its overarching vision.

Deconstructing Human Development Mar 11 2022 This book provides a critical deconstruction of the human development framework promoted by the United Nations Development Programme (UNDP) since 1990. Taking the Human Development Reports of the UNDP as its starting point for reflection, this book investigates the construction of this framework as well as its political function since the end of the Cold War. The book argues that the UNDP's discourse on development relies on essentialist philosophical, cultural, and political assumptions dating back to the 19th century and concludes that these assumptions - also present in the MDGs and SDGs - impede a full grasp of the complex and multi-layered global problems of the current world. Whilst development critiques traditionally relied on liberal, Marxist or Foucauldian theoretical frameworks and focused on epistemological or political economy issues, this book draws on the post-foundational and post-structuralist work of Ernesto Laclau and Jacques Derrida and proposes an ontological and relational reading of development discourses that both complements and further develops the insights of previous critiques. This book is key reading for advanced students and researchers of Critical Development Studies, Political Science, the UN, and Sustainable Development.

Taxation, International Cooperation and the 2030 Sustainable Development Agenda Jan 29 2021 This open access volume addresses the link between international taxation, the 2030 Sustainable Development Agenda and the medium-term revenue strategy concept. It also analyses how countries and governments can reinforce this link in current and future initiatives in international taxation, including the base erosion profit shifting project initiated by the Organization for Economic Co-operation and Development with the political mandate of the G20. It discusses the 2030 Sustainable Development Agenda that are relevant for taxation and assesses the current work done by international organizations, regional tax organizations and countries to achieve these Sustainable Development Goals. The contributions to this volume provide an interdisciplinary mix of expertise in tax law, international political economy, global governance and international relations. Through these different perspectives, this volume provides an elaborate reference and evaluation framework for multilateral cooperation on tax and development to strengthen the revenue system of developed and developing countries. This topical volume is of interest to students and researchers of the social sciences, law and economics, as well as policy makers working on taxation.

Stories from 2030: Disruption - Acceleration - Transformation Jan 17 2020 Stories of restlessness, disruption, conflagrations, faraday tents, myth-makers, bubble-worlds, local nomads, transformation, resilience and the power of the exponential. The VISIONS 2100 Project was launched at the COP21 conference in Paris in 2015. In the first instalment, *Stories from your Future*, the 80 contributors told of their hopes and fears for the long term. This took away the practicalities of today and considered what they really wanted. The stories were challenging, amazing and sometimes heart-warming. But 'vision without action is merely a dream' so the hard work of action must accelerate. The 82 contributors to *Stories from 2030* work on identifying risks, harnessing finance, developing or deploying solutions and driving government action. They are the people that are driving the critical actions of this decade. In their stories, they address climate justice, collaboration across countries, companies and communities, adaptation of cities and economies, of ecosystems and biodiversity, of health and wellbeing. They tell you what you can do to help. Contributors are from business, innovation, finance, journalism, politics, storytelling and the environment. Many are unsung heroes delivering immeasurable progress for world. Some have a bigger stage, such as Connie Hedegaard, Tony Juniper, Sir David King FRS, David Lammy MP, Katharine Hayhoe, Hunter Lovins, Jules Kortenhorst, Achim Steiner, Sharan Burrow and Bill McKibben. Read their stories as they report back from 2030 and decide on the part you will play this decade. It is time to stir! Praise for Visions 2100: *Stories from Your Future* "Good leaders know that you can load the dice by actively rallying people around a vision...there are not enough compelling visions of the happy, sustainable society to which we should be moving." - Financial Times, UK "...powerful stuff, written in a way that is both conversational and jaw-droppingly well-informed. The research effort involved in the book is obvious, and altogether dazzling." - The Fifth Estate, Australia

Leadership 2030 Nov 19 2022 The tumultuous changes in the business world during the last decade have forced too many to focus on the short term, rushing to figure out how to produce quarterly profits in chaotic conditions. As a result, the longer view is often obscured, leaving businesses so busy fighting today's battles that they are completely unprepared for tomorrow's war. The next cataclysmic wave is surging relentlessly ahead, demanding leaders who can steer their companies through complexity and change. In Leadership 2030, six megatrends are uncovered for the forward-thinking leader that will dramatically impact organizations' markets, cultures, systems, and processes: 1. Globalization 2.0: Asia dominates the global economy. 2. Climate change: Sustainability becomes imperative. 3. Individualism: Freedom of choice erodes loyalty. 4. Digitization: Boundaries blur between private and working lives. 5. Demographic changes: Aging populations intensify the talent war. 6. Converging technologies: The sharpest tech shift in history is around the corner. Research findings and case studies, drawn from original research conducted jointly with foresight company Z-Punkt and further analyzed by Hay Group, provide compelling evidence of each megatrend and highlight the skills, capabilities, and attitudes leaders must cultivate in order to maneuver through it all. Tomorrow's changes are coming. With Leadership 2030, you can prepare for them today!

2030 Jun 21 2020 A near-future world struggles with the challenges of a dramatically aging population revitalized by the cure for cancer, a scenario that is challenged by an unprecedented natural disaster that drives the government into bankruptcy.

A Tale of Multiple Disconnects Aug 04 2021 This study addresses the percolation and domestication of the United Nations' "2030 Agenda for Sustainable Development – Transforming our World" in Germany with a view to understanding its impact on domestic gender equality policies. Concentrating on federal-level policymaking, the main finding of the study is that the 2030 Agenda and SDG 5 have, as of yet, not had a discernible impact on domestic gender equality struggles. This is surprising, since the 2030 Agenda offers a holistic conception of sustainability, and thus has the "value added" advantage of merging and transcending the rather disjointed gender, social justice, and ecological sustainability policy strands. Based on 28 interviews with government officials, CSO representatives, and researchers, the study observes multiple disconnects. There is a lack of cohesion and consistency across ministries and civil society actors, resulting in a horizontal disconnect. There is a vertical disconnect between the 2030 Agenda as a multilateral agreement and its domestication. Perhaps because the 2030 Agenda is a soft-law tool, it has limited clout for transformative change; it is moreover seen to be weaker on gender equality commitments than other pertinent international agreements. An obvious conclusion of the study is to strengthen institutional linkages. The vision of gender equality needs to resonate with all actors supporting sustainable development. This could support women's struggles in addressing Germany's structural gender disadvantages.

The Palgrave Handbook of Development Cooperation for Achieving the 2030 Agenda Dec 20 2022 This open access handbook analyses the role of development cooperation in achieving the 2030 Agenda in a global context of 'contested cooperation'. Development actors, including governments providing aid or South-South Cooperation, developing countries, and non-governmental actors (civil society, philanthropy, and businesses) constantly challenge underlying narratives and norms of development. The book explores how reconciling these differences fosters achievement of the Sustainable Development Goals. Sachin Chaturvedi is Director General at the Research and Information System for Developing Countries (RIS), a New Delhi, India-based think tank. Heiner Janus is a researcher in the Inter- and Transnational Cooperation programme at the German Development Institute. Stephan Klingebiel is Chair of the Inter- and Transnational Cooperation programme at the German Development Institute and Senior Lecturer at the University of Marburg, Germany. Xiaoyun Li is Chair Professor at China Agricultural University and Honorary Dean of the China Institute for South-South Cooperation in Agriculture. Prof. Li is the Chair of the Network of Southern Think Tanks and Chair of the China International Development Research Network. André de Mello e Souza is a researcher at the Institute for Applied Economic Research (IPEA), a Brazilian governmental think tank. Elizabeth Sidiropoulos is Chief Executive of the South African Institute of International Affairs. She has co-edited *Development Cooperation and Emerging Powers: New Partners or Old Patterns* (2012) and *Institutional Architecture and Development: Responses from Emerging Powers* (2015). Dorothea Wehrmann is a researcher in the Inter- and Transnational Cooperation programme at the German Development Institute.

Negotiating the EU's 2030 Climate and Energy Framework Aug 16 2022 In 2014, European heads of state selected new targets for the EU as part of the 2030 climate and energy framework. These targets will guide the ambition and nature of EU policy in this area until 2030 and are likely to have important implications for Europe's transition to a low-carbon economy. This book exposes the role of civil society and business interest groups in setting the policymaking agenda and defining the range of options for the framework. Based on a unique sample of 32 in-depth interviews with Brussels policy elites, this book casts EU interest representation in a new light. In a novel application of the 'multiple streams approach', sequential chapters present the problems faced by policymakers, the range of policy options available to address them and the political constraints within which policy entrepreneurs attempted to attached policies to problems.

The 2030 Spike Dec 28 2020 The clock is relentlessly ticking! Our world teeters on a knife-edge between a peaceful and prosperous future for all, and a dark winter of death and destruction that threatens to smother the light of civilization. Within 30 years, in the 2030 decade, six powerful 'drivers' will converge with unprecedented force in a statistical spike that could tear humanity apart and plunge the world into a new Dark Age. Depleted fuel supplies, massive population growth, poverty, global climate change, famine, growing water shortages and international lawlessness are on a crash course with potentially catastrophic consequences. In the face of both doomsaying and denial over the state of our world, Colin Mason cuts through the rhetoric and reams of conflicting data to muster the evidence to illustrate a broad picture of the world as it is, and our possible futures. Ultimately his message is clear: we must act decisively, collectively and immediately to alter the trajectory of humanity away from catastrophe. Offering over 100 priorities for immediate action, *The 2030 Spike* serves as a guidebook for humanity through the treacherous minefields and wastelands ahead to a bright, peaceful and prosperous future in which all humans have the opportunity to thrive and build a better civilization. This book is powerful and essential reading for all people concerned with the future of humanity and planet earth.

2030 Sep 05 2021 Winner of the 2012 Grand Canyon Reader Award for a Non-fiction book Global events and new technology change how we live from moment to moment. So, what will our world be like in twenty years? Come take a look as futurists Amy Zuckerman and James Daly examine what a kid's daily life might be like in the year 2030. Inspired and informed by trends and scientific and technological research, 2030 is not only a peek at some cool future gadgets (talking dog collars, cars that drive themselves), but also a thoughtful examination of how our lives might be impacted as we adjust to environmental change.

Complementarities between the ASEAN Community Vision 2025 and the United Nations 2030 Agenda for Sustainable Development Jul 23 2020 Sustainable Development (2030 Agenda), and to support ASEAN Member States to implement the two agendas in an integrated way. The report presents a framework for identifying complementarities, and proposes a number of flagship initiatives to support ASEAN countries to simultaneously translate the ASEAN Vision 2025 and the 2030 Agenda from political aspiration to practical implementation. The report discusses complementarities at several levels of the ASEAN Vision and the 2030 Agenda, including: goals and objectives; values and operational principles; and the five cross-cutting themes of poverty eradication, infrastructure and connectivity, sustainable management of natural resources, sustainable production and consumption, and resilience. For these themes, the report provides analysis of the trend between 2000 and 2015 and offers scenarios for future development until 2030. The report concludes with proposals for concrete implementation mechanisms. As the sole regional multisectoral intergovernmental platform, ESCAP is harnessing the "universality" of the 2030 Agenda goals and targets, while promoting the regional policy consistency, coherence and coordination to reinforce the scaling and complementarity of the implementation of the ASEAN Vision 2025 and the 2030 Agenda.

Blue Transformation – Roadmap 2022–2030 Oct 26 2020 This document outlines a roadmap for the transformation of aquatic food systems - 'Blue Transformation', providing a compass for the FAO's work on aquatic food systems for the period 2022–2030. This roadmap for Blue Transformation aligns with the 2021 Declaration for Sustainable Fisheries and Aquaculture of the Committee on Fisheries (COFI) of the Food and Agriculture Organization of the United Nations (FAO) and FAO's Strategic Framework 2022–2031. It focuses on the elements that would maximize the contribution of aquatic food systems to the Sustainable Development Goals (SDGs). The Blue Transformation roadmap recognizes the importance of aquatic food systems as drivers of employment, economic growth, social development and environmental recovery, which all underpin the SDGs. It also recognizes the need to support the 2030 Agenda through the transformation to more efficient, inclusive, resilient and sustainable aquatic food systems for better production, better nutrition, a better environment, and a better life, leaving no one behind.

Post 2030-Agenda and the Role of Space Oct 18 2022 This book provides a deep insight to which extent further improvement should be envisaged to ensure and improve the sustainable development beyond 2030 (the Sustainable Development Goals is a set of 17 global goals with 169 associated targets which the state community adopted in 2015). As the world, its environment, economy and society is getting more and more technical advanced, it is of high interest to analyze how space and its various applications can support this development. Once the Goals of the "2030 Agenda for Sustainable Development" will be achieved new challenges are waiting. The analysis takes into account a proactive use of artificial intelligence for the development based on space infrastructure. Another important aspect revolves around the economic development which asks for further analysis of the cryptocurrencies relationship with space applications and how to use space based cryptocurrencies for development. Environment-wise the challenges for a sustainable development on Earth i.e. water supply, but also in outer space are requested ensuring a sustainable exploration and exploitation of space and its orbital resources. The book also highlights possible contributions of the post-2030 space industry to global economic development based on satellite technology and the enlargement of the scope of application of satellite data in administration and Justice to ensure development of effective, accountable and transparent institutions at all levels to promote growth, stability and security and peace on global level.

GMS Transport Sector Strategy 2030 Dec 16 2019 This new strategy for transport development in the Greater Mekong Subregion (GMS) consists of a strategic framework covering 2018–2030 and a set of performance indicators initially covering 2018–2022. It is mainly a strategic document providing a common framework for GMS cooperation in the transport sector. Cooperation in the transport sector has been at the core of the GMS Economic Cooperation Program since its inception in 1992. The main thrust of the program was eliminating the barriers to cooperation, and the significant lack of connectivity was a critical constraint on economic relations among the GMS countries.

A New Era in Global Health Nov 07 2021 Explores the great potential for nursing involvement in promoting global health. This unique text elucidates the relationship between global nursing and global health, underscoring the significance of nurses' contributions in furthering the Post-2015 Agenda of the United Nations regarding global health infrastructures, and examining myriad opportunities for nurses to promote the 17 Sustainable Development Goals (SDGs) and foster health and healthy environments worldwide. While past nursing literature has emphasized nursing's potential involvement and influence in the global arena, this is the first book to identify, validate, and promote nurses' proactive and multidimensional work in furthering current transnational goals for advancing health on a global scale. The book includes an introduction to global health, clarification of terms and roles, perspectives on education, research, and theory related to global nursing, a history of the partnership between the United Nations and the nursing profession, an in-depth exploration of the 17 SDGs and relevant nursing tasks, as well as several chapters on creating a vision for 2030 and beyond. It is based on recent and emerging developments in the transnational nursing community, and establishes, through the writings of esteemed global health and nursing scholars, a holistic dialogue about opportunities for nurses to expand their roles as change agents and leaders in the cross-cultural and global context. The personal reflections of contributors animate such topics as global health ethics, the role of caring in a sustainable world, creating a shared humanity, cultural humility, and many others. Key features: Examines, for the first time, nursing's role in each of the 17 SDGs; Integrates international initiatives delineating nursing's role in the future of global health; creates opportunities for nurses to redefine their contributions to global health; includes personal reflections to broaden perspectives and invite transnational approaches to professional development; distills short, practical, and evidence-based chapters describing global opportunities for nurses in practice, education, and research.

2030: How Today's Biggest Trends Will Collide and Reshape the Future of Everything Feb 22 2023 INSTANT WALL STREET JOURNAL BESTSELLER! "Bold, provocative...illuminates why we're having fewer babies, the middle class is stagnating, unemployment is shifting, and new powers are rising." —ADAM GRANT The world is changing drastically before our eyes—will you be prepared for what comes next? A groundbreaking analysis from one of the world's foremost experts on global trends, including analysis on how COVID-19 will amplify and accelerate each of these changes. Once upon a time, the world was neatly divided into prosperous and backward economies. Babies were plentiful, workers outnumbered retirees, and people aspiring towards the middle class yearned to own homes and cars. Companies didn't need to see any further than Europe and the United States to do well. Printed money was legal tender for all debts, public and private. We grew up learning how to "play the game," and we expected the rules to remain the same as we took our first job, started a family, saw our children grow up, and went into retirement with our finances secure. That world—and those rules—are over. By 2030, a new reality will take hold, and before you know it: - There will be more grandparents than grandchildren - The middle-class in Asia and Sub-Saharan Africa will outnumber the US and Europe combined - The global economy will be driven by the non-Western consumer for the first time in modern history - There will be more global wealth owned by women than men - There will be more robots than workers - There will be more computers than human brains - There will be more currencies than countries All these trends, currently underway, will converge in the year 2030 and change everything you know about culture, the economy, and the world. According to Mauro F. Guillen, the only way to truly understand the global transformations underway—and their impacts—is to think laterally. That is, using "peripheral vision," or approaching problems creatively and from unorthodox points of view. Rather than focusing on a single trend—climate-change or the rise of illiberal regimes, for example—Guillen encourages us to consider the dynamic interplay between a range of forces that will converge on a single tipping point—2030—that will be, for better or worse, the point of no return. 2030 is both a remarkable guide to the coming changes and an exercise in the power of "lateral thinking," thereby revolutionizing the way you think about cataclysmic change and its consequences.

Africa Toward 2030 Jan 09 2022 Combining studies of demography, climate change, technology and innovation, political development, new actors in international development, and global governance frameworks, this book highlights the major underlying determinants of change in the African context and key uncertainties about the continent's future development prospects.

Crime Prevention and Justice in 2030 Feb 16 2020 This book analyzes human rights and crime prevention challenges from the perspective of the 1948 Universal Declaration of Human Rights and the 2030 United Nations Sustainable Development Agenda, in particular its goal 16 on promoting peaceful, inclusive and just societies, the creation and development of which depend on the interplay between various secular and non-secular (f)actors. The book reflects on the implementation of these two legal instruments from a “back to the future” standpoint, that is, drawing on the wisdom of contributors to the 2030 Agenda from the past and present in order to offer a constructive inter-disciplinary and intergenerational approach. The book’s intended readership includes academics and educationists, criminal justice practitioners and experts, diplomats, spiritual leaders and non-governmental actors; its goal is to encourage them to pursue a socially and human rights oriented drive for “larger freedom,” which is currently jeopardized by adverse political currents.

Conflict Prevention in the UN’s Agenda 2030 Dec 08 2021 This book analyses the UN’s Agenda 2030 and reveals that progress is lagging on all five interlocking and interdependent themes that are discussed: conflict prevention, development, peace, justice and human rights. Many voices have already been raised, including that of the UN Secretary-General that the Sustainable Development Goals will not be met by 2030 unless there is a re-doubling of efforts. Still, on development as such, there is much striving. The book puts the concept of preventive diplomacy into all of the issues of modern international relations, from the US/China confrontation to the various conflicts bedeviling Africa. It bridges the two worlds of the international relations specialist on the one hand and that of the academic interested in UN affairs on the other hand. There is normally little contact between those two specializations. The authors have taken several current issues to show how the millennium debates and the SDG targets are relevant to “realist school” conflicts, and that there is work under way to operationalize ideas and theories in this respect. This is the first ever discussion of the conflict prevention dimension in the UN’s Agenda 2030 which seeks to advance sustainable development with a view to reinforcing peace and justice on the foundations of respect for universal human rights.

Review of Implementation of IMF Commitments in Support of the 2030 Agenda for Sustainable Development Feb 10 2022 The IMF is committed to supporting implementation of the 2030 development agenda. The IMF’s primary contribution to global development is to deliver on its mandate to help maintain macroeconomic and financial stability at both the global and national levels. The IMF also supports the development agenda through targeted support for national policies—via policy advice and support for capacity development (CD) in areas where it has specialist expertise.

Rethinking Transportation 2020-2030 May 13 2022

Sustainable Development Action – the Nordic Way Jun 02 2021 The 2030 Agenda, adopted by the UN General Assembly in September 2015, outlines an ambitious and universal plan of action for people, planet and prosperity as it seeks to strengthen universal peace and freedom. This report presents national and Nordic action on Agenda 2030 with the aim to inform and support the Nordic Council of Ministers in formulating a new Nordic Sustainable Development Programme. All Nordic countries are engaged and strongly committed to implementing Agenda 2030 and there is a broad societal interest in joint Nordic action. The existing Nordic Strategy for Sustainable Development and several other key initiatives within Nordic cooperation already contribute to the goals of Agenda 2030. A new Nordic Sustainable Development Programme can build upon a strong foundation and add further value to the national and international work done by the Nordic countries.

Mining, Materials, and the Sustainable Development Goals (SDGs) Jun 14 2022 This book provides a systematic assessment of how the mining and materials sector contributes to the 17 sustainable development goals (SDGs) set forth by the United Nations in 2015. While the target date for reaching these goals of 2030 is considered a benchmark, the book looks beyond this date and considers a longer-term vision. Written by a mix of authors from developing and developed countries Offers coverage of environmental, economic, and social dimensions of the SDGs Follows the 17 SDGs and includes a short chapter on each, followed by a case example Includes longer conceptual chapters that consider cross-cutting issues as well Aimed at those working in minerals, mining, and materials, this work offers readers a practical vision of how these sectors can have a positive impact on meeting these vital global targets.

Sustainability in Developing Countries Feb 27 2021 This book illustrates an alternative approach to ‘state of sustainability’ reporting by presenting cross-sectoral and multi-disciplinary discussions on sustainability issues in the context of a developing country, Botswana. The book volume illustrates how academic publishing can supplement African governments’ existing forms of reporting on sustainability by providing on-ground detailed descriptions and experiences relating to achievement of the various sustainable development goals (SDGs). In addition, this process involves, increases and enhances diversity of stakeholders that report on sustainability. Furthermore, the approach resonates with the UN’s recommendation to build local strategies for implementation of the 2030 agenda for sustainable development. Conventional reporting on sustainability by most African countries is an exercise that is customarily the preserve of designated government ministries. While this form of reporting provides a consistent platform for tracking sustainable development goals, it can also benefit from juxtaposition with in-depth descriptions and experiences provided by academic publishing. Academia, through publishing, provides a framework for on-ground situation-analysis as well as in-depth descriptions of African country’s grass-root experiences, thus allowing for temporal tracking of sustainable development milestones. As this volume illustrates, experiences from the various contributors on this volume highlight different points of departure towards achieving the 2030 agenda. Topics covered include biodiversity, water management, world heritage, environment, education, tourism, gender, institutional approaches to achievement of SDGs, as well as contribution of non-governmental organisations (NGO)’s amongst others.

Replacing GDP by 2030 Sep 17 2022 Proposes a new strategy for the beyond-GDP community which aims to replace the economic paradigm centred on Gross Domestic Product (GDP) by 2030.

Contours of the World Economy 1-2030 AD Jan 21 2023 This book seeks to identify the forces which explain how and why some parts of the world have grown rich and others have lagged behind. Encompassing 2000 years of history, part 1 begins with the Roman Empire and explores the key factors that have influenced economic development in Africa, Asia, the Americas and Europe. Part 2 covers the development of macroeconomic tools of analysis from the 17th century to the present. Part 3 looks to the future and considers what the shape of the world economy might be in 2030. Combining both the close quantitative analysis for which Professor Maddison is famous with a more qualitative approach that takes into account the complexity of the forces at work, this book provides students and all interested readers with a totally fascinating overview of world economic history. Professor Maddison has the unique ability to synthesise vast amounts of information into a clear narrative flow that entertains as well as informs, making this text an invaluable resource for all students and scholars, and anyone interested in trying to understand why some parts of the World are so much richer than others.

Fashion Industry 2030. Reshaping the Future Through Sustainability and Responsible Innovation Nov 14 2019

Baltic 2030 Bumps on the Road: Nov 26 2020 The report Baltic 2030: Bumps on the Road provides an overview of the 2030 Agenda implementation in the Baltic Sea Region, aimed at informing strategy and prioritisation discussions for national and regional collaboration. For each of the region’s eleven countries, performance on the Sustainable Development Goals (SDGs) is examined and five selected SDGs are discussed at the indicator level. Based on this analysis, the authors recommend seven avenues for action where greater collaboration in the region can support SDG achievement. The report was commissioned by the Council of the Baltic Sea States (CBSS) and is jointly published by CBSS and the Nordic Council of Ministers (NCM). It was drafted by the advisory firm Nordic Sustainability and follows the previous Bumps on the Road to 2030 report published by the NCM in 2017.

Rise of China Sep 24 2020 Presents absolute as well as relative analysis of China’s “Comprehensive National Power”. The book covers China’s role in global power dynamics - competition or cooperation with major powers and its neighbours and its power status by 2030. Strategic implications of China’s rise dictate the courses of action to be adopted by the US whom it intends to displace, and its immediate neighbour India.

Marine Renewable Energies Mar 31 2021 The ocean is a huge reservoir of renewable energy sources, such as wind, currents, tides, waves, marine biomass, thermal energy, osmotic power, and so on. Like other maritime nations in Europe, France enjoys significant potential to develop these energy sources, especially overseas. In March 2007, Ifremer’s chairman launched a prospective foresight study on these energies for the time horizon of 2030. With support from the Futuribles consulting group, twenty French partners representing the main stakeholders in the sector carried out this work. Their objective was to identify the technologies, specify the socio-economic prerequisites for them to emerge and be competitive and assess their respective impacts on power sources and the environment. What was learned from this study can be applied well beyond France, at a time when a European maritime strategy is taking shape.

A Short History of the Future Aug 24 2020 First Published in 2006. Routledge is an imprint of Taylor & Francis, an informa company.

Universities and Sustainable Communities: Meeting the Goals of the Agenda 2030 May 01 2021 The book showcases examples of university engagement in community initiatives and reports on the results from research and from a variety of institutional projects and programmes. As a whole, the book illustrates how actors at the community (microlevel) and other levels (meso and macro) can make valuable and concrete contributions to the implementation of the Sustainable Development Goals (SDGs) and, more specifically, to achieving the objectives defined at the 2030 Agenda for Sustainable Development. It is one of the outcomes of the “Second World Symposium on Sustainability Science”, which was jointly organised by the Pontificia Universidade Católica do Paraná (Brazil), the Research and Transfer Centre “Sustainable Development and Climate Change Management” and the “European School of Sustainability Science and Research” at Hamburg University of Applied Sciences (Germany), in cooperation with the Inter-University Sustainable Development Research Programme (IUSDRP).

Bumps on the Road to 2030 May 21 2020 This discussion paper titled “Bumps on the Road to 2030 - An overview of the common challenges for the Nordic countries in achieving the Sustainable Development Goals (SDGs)” was prepared by the Danish think tank Sustainia, by commission from the Nordic Council of Ministers in April 2017. The task at hand was to analyze, based on existing international comparisons, which SDGs the Nordic countries need to work on the most, in order to achieve them by 2030.

OECD Environmental Outlook to 2030 Oct 14 2019 The OECD Environmental Outlook to 2030 provides analyses of economic and environmental trends to 2030, and simulations of policy actions to address the key challenges.

Disaster Management for 2030 Agenda of the SDG Apr 12 2022 This book shows how specifically each goal of Sustainable Development Goals could be incorporated in country wise developmental programmes set to transform the world. It highlights how a combination of initiatives on mitigation of disasters and a robust progress could build a resilient society. The book discusses multidimensional processes such as administrative, financial and social challenges which can mitigate disasters and help in an advancement towards SDG Goals. It highlights the embeddedness of SDGs in disaster mitigation as they tend to be linked and interdependent. By linking sustainable development to disaster mitigation one gets a strong justification for investment into preparedness as a guarantee or insurance against loss and damages due to unforeseen disasters.

Egypt’s Strategy to Meet the Sustainable Development Goals and Agenda 2030: Researchers’ Contributions Jul 03 2021 This book focuses on Egypt as a representative example of emerging economies struggling to achieve their sustainable development goals (SDGs). The Egyptian government has launched Egypt’s Vision 2030 in line with the 2030 Agenda, also known as the Sustainable Development Strategy (SDS), which encompasses the economic, social and environmental dimensions of development. It is under the SDS that all development plans in Egypt are incorporated while at the same time being strongly guided by the SDGs. Aware of the principle of shared but differentiated responsibility, Egypt also recognizes that fundamental challenges remain, despite a strong willingness to achieve the SDGs. High birth rates, brain drain phenomena, water scarcity, migration, discrimination against women and girls, a growing informal sector and instability in neighboring states (especially Libya and Syria) are only some of the many hindrances to sustainable development. In order to address these challenges, Egypt relies heavily on the SDGs, which are aimed at transforming our world. Although there is an urgent need for a drastic change in the way we use the Earth, the question arises as to whether the SDGs are sufficient to facilitate such a transformation. This book explores the key environmentally related Sustainable Development Goals (SDGs) and offers a cutting-edge assessment of current progress with a view to reaching these objectives by 2030. The book highlights some of the key findings and ideas for how research may help achieve the 17 Sustainable Development Goals in enterprises. The book provides a useful framework that can help and aid the Egyptian government to assess the many goals and targets outlined in the 2030 Agenda. The analysis of Egypt can be used as a blueprint for other developing nations and globally in order to guide policy toward achieving the SDGs. Covering food security, water resilience, climate change, agronomics, rural life, environmental impact assessment as a tool for measuring the achievement of the goals, Egyptian education, the COVID-19 pandemic, cultural and societal dimensions, this book will be of great interest to students and scholars of sustainable development and climate change, as well as practitioners and policymakers involved in sustainable development and disaster management.

The Short and Winding Road to 2030 Mar 19 2020

The Future of Transport Oct 06 2021 Building on the policy measures in the 10 Year Plan for Transport (ISBN 1851124136) published in July 2000, this White Paper considers factors which are likely to shape the transport system over the next 30 years, and sets out the Government’s strategy to address these issues, including an outline of expenditure plans to 2015. The Government’s three stated themes, upon which the strategy is built, are: sustained investment over the long term, improvements in transport management, and planning ahead. Issues discussed include: managing the increasing demand for travel and the legacy of under-investment in transport infrastructure; measures to improve the road network, including promoting a public debate on road pricing options and working alongside local authorities to tackle local congestion problems; measures to improve the rail network, including support for Crossrail, the project to create a new east-west railway across London; improving public transport, specifically bus services; promoting walking and cycling as alternatives for local trips; aviation and shipping industries; freight transport; devolved decision-making at local and regional levels; strategic options relating to spatial planning and housing growth; environmental concerns; safety and security issues. The scope of the White Paper extends to England, and to Wales and Scotland in so far as it covers UK policy responsibility. Two accompanying documents, i) a review of the Crossrail business case (ISBN 1904763456) and ii) a feasibility study of road pricing in the UK (ISBN 1904763499) are also available.
