Have about 700 colored photographs and a few X-rays, CT scans, etc. to help students to develop a good clinical eye. Easy to understand, concise, yet full of necessary information. In the previous two volumes of this series, we presented classic problems in internal medicine as illustrated by actual cases cared for in our institution. It has been gratifying for us to see the interest that these volumes have generated with students and trainees. We remain committed to the case method of instruction, and believe that there is no better method to learn medicine than to have an individual patient problem as the basis for study of pathophysiology, natural history, diagnosis and management. We hope that our

readers find this third volume as enjoyable and instructive as the editors found it. Juan M. Bowen, MD Ernest L. Wooley, MD Advances and diagnostic imaging in a surgical technique have changed the approach to mitral valve regurgitation. This chapter provides an expert's perspective. Case 2 Cystic Fibrosis in Adults .. • 36 Andrew Libertin, MD John S. Heintz, MD As children with cystic fibrosis grow into adulthood, the internist assumes a greater role in their care. Case 3 Thrombotic Thrombocytopenic Purpura 51 . . . Donald E. Thornton, MD Earl N. Metz, MD, FACP Patients with ITP continue to present difficulties in diagnosis and management. Two experts discuss the current approach to ITP. It is vitally important for medical students and junior doctors to grasp an understanding of 'real-life medicine'. This innovative book of cases shows how a particular presentation may progress, and the different complications that may arise and emerge over time, which may be missed by the 'snapshot in time' approach taken by many problem-based volumes. The content reflects the average length of stay for a patient in hospital, in which their situation can change in a multitude of ways, and the management of chronic conditions may also need to be adapted as complications arise. Demonstrates the real bedside experiences that medical students can expect, in whichever simple or complex way that they may present Cases selected from a range of sub-specialties for comprehensive coverage across the curriculum Illustrates the complicated, progressive problems that will be seen while practicing as a doctor with detailed diagrams and diagnostic imagery to aid understanding Shows, with timepoints, how differential diagnoses may change as more information becomes available and new symptoms arise Describes a typical initial hospital stay, and subsequent presentations to the general practitioner and hospital readmission

Acute Medicine: Clinical Cases Uncovered combines patient cases and outcomes, drawn from real-life experiences, with reference to the curriculum for Training in General (Acute) Medicine. It provides self-assessment MCQs, EMQs and SAQs to give medical students, junior doctors, nurses and allied healthcare professionals the perfect preparation for life on the wards. 100 Cases in Clinical Medicine is an indispensable revision tool for medical students preparing for clinical examinations or OSCEs. Using scenarios which mimic daily life, the cases will interest students in clinical problems and help them develop their clinical reasoning skills, with each case presenting details of a patient's medical history and the key findings of a clinical examination, together with initial investigation results for evaluation. Key questions then prompt the student to evaluate the patient, and reach a decision regarding their condition and the possible management plan, while the answer pages will help the student to understand the processes that a clinician goes through in dealing with the problems presented. Contents are organised to provide a quick review of each body system, with a selection of cases relevant to that specific system, then the majority are presented randomly to mimic real life in a GP surgery or emergency department. New to this edition: a review of each body system as well as random cases; new page design with a second colour used throughout; and brought up-to-date with 25% new cases. Presents trainees with detailed clinical cases for numerous diseases and disorders covering various body systems including respiratory, gastroenterology, neurology and haematology. Questions and answers are provided at the end of each case. The purpose of this

clinical transfusion medicine handbook is to take the reader through a variety of clinical problems, each one likely to be encountered in a busy teaching hospital. The reader follows the stream of clinical and laboratory data, developing the ability for critical thinking which leads him/her to diagnosis and appropriate management. The book is a lively illustration of various clinical problems in transfusion medicine, including immune complications, microbiological problems, blood component use, apheresis techniques, and management of complex situations such as multiple trauma, sickle cell crisis, and organ transplantation. Each case is carefully chosen and presented, with incorporated questions, leading the reader towards solution of the problem in a logical and didactic manner. Medical curricula change continually to reflect the evolving roles of doctors, changes in treatments and advances in technology. Medicine moves at pace and it takes a practitioner committed to continuing professional development to keep up. This new edition of 250 Cases in Clinical Medicine has been thoroughly updated to reflect the changing form of the Royal College of Physicians' curriculum. Some chapters from the previous edition have been dropped to allow new, more clinically relevant topics to be included. Chapters of symptom-based cases have also been added, as well as a section on acute medical problems and their management. Essential reading for MBBS, PLAB, MRCP (UK), MRCPI, MD (New Zealand, Malaysia, Singapore, India, Pakistan, Sri Lanka and Bangladesh), FRACP, FCCP and postgraduate medical examinations in the USA including USMLE and ABIM.
