Discourse on the Move Sep 14 2021 Discourse on the Move is the first book-length exploration of how corpus-based methods can be used for discourse analysis, applied to the description of discourse organization. The primary goal is to bring these two analytical perspectives together: undertaking a detailed discourse analysis of each individual text, but doing so in terms that can be generalized across all texts of a corpus. The book explores two major approaches to this task: 'top-down' and 'bottom-up'. In the 'top-down' approach, the functional components of a genre are determined first, and then all texts in a corpus are analyzed in terms of those components. In contrast, textual components emerge from the corpus analysis in the bottom-up approach, and the discourse organization of individual texts is then analyzed in terms of linguistically-defined textual categories. Both approaches are illustrated through case studies of discourse structure in particular genres: fund-raising letters, biology/biochemistry research articles, and university classroom teaching.

[Corpora and Discourse](#) Sep 26 2022 Corpus linguistics has made impressive strides in the fields of lexicography and grammatical description, but has had relatively little to say as yet in describing features of discourse. This volume, then, examines how it is possible to use concordance technology and the detailed linguistic evidence available in corpora to enhance the study of, among other things, how speakers/writers organise their discourse, how they express evaluation

of their topics and the rhetorical strategies they employ to persuade an audience. Particular attention is paid to interrogating specialized corpora and to devising techniques to discover what is going on between speakers and between authors and readers in particular varieties of the language. These studies reveal the value of integrating corpus techniques with other, non-automatic, methods of research into the linguistic record and of combining quantitative and qualitative approaches. In general, they show how it is possible to use corpora to analyse discourse not only as product but also as process.

The Routledge Handbook of Corpus Linguistics Apr 29 2020 Provides an overview of a dynamic and rapidly growing area with a widely applied methodology. This handbook covers the historical development of the field and its growing influence and application in other areas. It is suitable for advanced undergraduates and postgraduates.

[Corpora and Discourse](#) Dec 06 2020 Corpus linguistics has made impressive strides in the fields of lexicography and grammatical description, but has had relatively little to say as yet in describing features of discourse. This volume, then, examines how it is possible to use concordance technology and the detailed linguistic evidence available in corpora to enhance the study of, among other things, how speakers/writers organise their discourse, how they express evaluation of their topics and the rhetorical strategies they employ to persuade an audience. Particular attention is paid to interrogating specialized corpora and to devising techniques to discover what is going on between speakers and between authors and readers in particular varieties of the language. These studies reveal the value of integrating corpus techniques with other, non-automatic, methods of research into the linguistic record and of combining quantitative and qualitative approaches. In general, they show how it is possible to use corpora to analyse discourse not only as product but also as process.

[Corpora, Grammar and Discourse](#) Aug 26 2022 Corpus linguistics has had a revolutionary impact on grammar and discourse research. Not only has it opened up entirely new theoretical perspectives and methodological possibilities for both fields, but it has also to a considerable extent erased the boundaries that have traditionally been drawn between them. This book showcases a variety of current corpus-based approaches to the study of grammar and discourse, and makes a case for seeing grammar and discourse as fundamentally inter-related phenomena. The book features contributions from leading experts in cognitive linguistics, construction grammar, critical discourse studies, genre and register analysis, phraseology, language learning and teaching, languages for specific purposes, second language acquisition, sociolinguistics, systemic functional linguistics and text linguistics. An essential reference point for future research, *Corpora, Grammar and Discourse* has been edited in honour of Susan Hunston,

whose own work has consistently pushed at the boundaries of corpus-based research on grammar and discourse for over three decades. [Interdisciplinary Research](#) [Discourse](#) Mar 09 2021 Interdisciplinary Research *Discourse: Corpus Investigations into Environment Journals* provides cutting-edge insights into the nature of communication in interdisciplinary research domains. Using a corpus of nearly 12,000 articles taken from 11 journals, this book addresses the key questions that surround writing for an interdisciplinary audience. This book also explores: the ways in which writers write if they are writing for an interdisciplinary audience as well as for a specialist disciplinary audience; the different natures and instances of the term 'interdisciplinarity'; and whether an analysis of the rhetorical contexts in which research is relayed to interdisciplinary audiences is critical to understanding interdisciplinary research activities and communications. Written by two leading figures in the field of Corpus Linguistics, this is an essential text for researchers and upper-level undergraduates working in the areas of Corpus Linguistics, Discourse Analysis and Linguistics in areas of interdisciplinary communication. **Corpus Linguistics** Feb 05 2021 The aim of this volume is to present a state-of-the-art view on corpus studies. This collection of papers, presented at the XII Susanne Hübner Seminar in November 2003 at the University of Zaragoza, comprises both quantitative and qualitative analyses and studies on both written and oral corpora. Structured in seven sections, the book covers a wide range of approaches and methodologies and reflects current linguistic research. The papers have been written by scholars from a large number of universities, mainly from Europe, but also from the USA and Asia. The volume offers contributions on diachronic studies, pragmatic analyses and cognitive linguistics, as well as on translation and English for Specific Purposes. The book includes several papers on corpus design and reports on research on oral corpora. At a more specific level, the papers analyse aspects such as politeness issues, dialectology, comparable corpora, discourse markers, the expression of evidentiality and writer stance, metaphor and metonymy, conditional sentences, evaluative adjectives, delexicalised verbs and nominalization.

[News as Changing Texts](#) Nov 24 2019 The updated and revised edition of this volume maintains its focus on the dialectic interrelation between 'news' and 'change'. News is intended as a textual type in its evolutionary - and revolutionary - development, while change is discussed with reference to the form, content and structure of news texts. The news texts in question range from the first forms of periodical news in the seventeenth century up to the news blogs and social media of the present day. Divided into four chapters, representing key historical moments in the process of news writing, each chapter makes use of a set of corpora specifically designed to suit

the needs of scholars working in those particular fields. Topics that the authors examine include pronominal usage and the interrelationship between news writer and reader, heads and headlines, the language of advertisements and other text classes, the trend towards conversationalization, and impartiality and 'perspective' in modern-day news. These and other topics, coupled with the varying corpora that are exploited to analyse them, call into question basic methodological issues that are examined from different perspectives. Throughout the volume, the authors contextualise the news publications of the day so as to better understand the continuous process of adjustment and renewal that news texts are subject to over time.

Web As Corpus Feb 17 2022 Is the internet a suitable linguistic corpus? How can we use it in corpus techniques? What are the special properties that we need to be aware of? This book answers those questions. The Web is an exponentially increasing source of language and corpus linguistics data. From gigantic static information resources to user-generated Web 2.0 content, the breadth and depth of information available is breathtaking - and bewildering. This book explores the theory and practice of the "web as corpus". It looks at the most common tools and methods used and features a plethora of examples based on the author's own teaching experience. This book also bridges the gap between studies in computational linguistics, which emphasize technical aspects, and studies in corpus linguistics, which focus on the implications for language theory and use.

Corpus, Culture, Discourse Aug 02 2020

Exploring Discourse and Ideology Through Corpora Oct 16 2021 This book explores discourse mainly through corpus linguistics methods. Indeed, Corpus-Assisted Discourse Studies has become a widely used approach for the critical (or non-critical) analysis of discourses in recent times. The book focuses on the analysis of different kinds of discourse, but most particularly on those which attempt to unveil social attitudes and values. Although a corpus methodology is deemed crucial in all research found here, it should not be inferred that a single, uniform technique is applied, but a wide variety of them, often shaped by the software which has been used. Also, more than one (qualitative or quantitative) methodology or drawing from various relevant sources is often called for in the critical analysis of discourses.

Seeing Through Multilingual Corpora Oct 23 2019 Through electronic corpora we can observe patterns which we were unaware of before or only vaguely glimpsed. The availability of multilingual corpora has led to a renewal of contrastive studies. We gain new insight into similarities and differences between languages, at the same time as the characteristics of each language are brought into relief. The present book focuses on the work in building and using the English-Norwegian Parallel Corpus and the Oslo Multilingual Corpus. Case studies are reported on lexis, grammar, and discourse. A concluding chapter sums up problems and prospects of corpus-based contrastive studies, including applications in lexicography, translator training, and foreign-language teaching. Though the main focus is on English and Norwegian, the approach should be of interest more generally for

corpus-based contrastive research and for language studies in general. Seeing through corpora we can see through language.

Corpora and Discourse Studies Oct 28 2022 This edited collection brings together contemporary research that uses corpus linguistics to carry out discourse analysis. The book takes an inclusive view of the meaning of discourse, covering different text-types or modes of language, including discourse as both social practice and as ideology or representation.

A Corpus-driven Study of Discourse Intonation Jul 13 2021 The book is the first to apply David Brazil's Discourse Intonation systems (prominence, tone, key and termination) to the study of a corpus of authentic, naturally-occurring spoken discourses. The Hong Kong Corpus of Spoken English (prosodic) is made up of approximately one million words consisting of four sub-corpora of equal size, namely academic, conversation, business and public. The participants are all adults and typically have either Cantonese or English as their first language. The four Discourse Intonation systems are described in terms of how the system works and how they are manifested in the corpus, both across the sub-corpora and also across speakers in the corpus. The book is accompanied with a CD containing the prosodically transcribed corpus together with iConc which is the software designed and written specifically to interrogate the HKCSE (prosodic). The issues raised and discussed are all of importance in Conversation Analysis, Corpus Linguistics, Discourse Analysis, Discourse Intonation, Pragmatics, and Intercultural Communication. *Corpora and Discourse - and Stuff* Sep 02 2020 Karin Aijmer, Professor of English at the University of Gothenburg in the years 1996-2006, is well known within the linguistic community, especially by virtue of her pioneering research within the domain of pragmatics in a broad sense, where her work in conversation and discourse analysis has played a particularly prominent role. In this volume, a large number of Karin Aijmer's wide network of friends and colleagues pay linguistic tribute, each in their own way, to her untiring exploration of some of the mysteries, or miracles, of ordinary, down-to-earth communication. A fair share of the papers in this festschrift deal with subject matter that is close to her heart, making frequent reference to her work; others provide different perspectives, shedding light on some other areas of language and linguistics.

Corpora and Discourse Studies Mar 01 2023 This edited collection brings together contemporary research that uses corpus linguistics to carry out discourse analysis. The book takes an inclusive view of the meaning of discourse, covering different text-types or modes of language, including discourse as both social practice and as ideology or representation.

Corpus Approaches to Discourse Nov 16 2021 Corpus linguistics has now come of age and Corpus Approaches to Discourse equips students with the means to question, defend and refine the methodology. Looking at corpus linguistics in discourse research from a critical perspective, this volume is a call for greater reflexivity in the field. The chapters, each written by leading authorities, contain an overview of an emerging area and a case-study, presenting practical advice

alongside theoretical reflection. Carefully structured with an introduction by the editors and a conclusion by leading researcher, Paul Baker, this is key reading for advanced students and researchers of corpus linguistics and discourse analysis.

Corpora and Language Education Dec 26 2019 Corpora and Language Education critically examines key concepts and issues in corpus linguistics, with a particular focus on the expanding interdisciplinary nature of the field and the role that written and spoken corpora now play in the fields of professional communication, teacher education, translation studies, lexicography, literature, critical discourse analysis, and forensic linguistics. The book also presents a series of corpus-based case studies illustrating central themes and best practices in the field.

Discourse in the Professions May 23 2022 This book explores the structure and use of academic and professional discourse through the lens of corpus linguistics. The goal of this book is to show how insights from corpus linguistic analyses can help us better understand how we use academic and professional language and help us find ways to better train newcomers to the genres used in various professional contexts. The contributions to this book show that specialized corpora of specific genres from a variety of fields allow us to make more relevant observations about the function and use of language for particular purposes. The specialized corpora examined include written and spoken academic genres, written and spoken business and legal genres, and written philanthropic genres. The book showcases a variety of approaches to analyzing the discourse of specialized corpora, and each chapter concludes with a reflection on the practical and pedagogical implications of the analysis.

Corpora Dec 18 2021 This volume presents current state-of-the-art discussions in corpus-based linguistic research of the English language. The papers deal with Present-day English, worldwide varieties of English and the history of the English language. A special focus of the volume are studies in the broad field of corpus pragmatics and corpus-based discourse analysis. It includes corpus-based studies of speech acts, conversational routines, referential expressions and thought styles, as well as studies on the lexis, grammar and semantics of English. And it also includes several studies on technical aspects of corpus compilation, fieldwork and parsing.

Corpora and Discourse Jan 31 2023 This book brings together contributions from a diverse collection of scholars who explore different ways of combining corpus linguistics and discourse analysis, studying discourse at the prosodic, lexical, and textual levels. Both spoken and written discourse are investigated in a variety of settings, including academia, the workplace, news, and entertainment. Not only does the volume offer a rich sample of English-language discourse from around the world, including international, learner, and non-standard varieties of English, but it also covers a range of topics and methods. This book will be of particular interest to researchers and students specializing in discourse studies, English linguistics, and corpus linguistics.

Statistics in Corpus Linguistics Jan 07 2021 A comprehensive and

accessible introduction to statistics in corpus linguistics, covering multiple techniques of quantitative language analysis and data visualisation.

Corpus Analysis in Academic Discourse Jun 11 2021 This collection sheds light on the ways in which corpus linguistics and the use of learner corpora might be applied to the study of academic discourse, revealing linguistic and rhetorical patterns and insights into variation across a range of disciplinary genres. Organized into three sections, the book highlights key tools and methodologies in corpus analysis to study such features as discourse markers, lexical bundles, linguistic complexity, lexico-grammatical conventions, and modality in case studies in studies of academic discourse, both in a second language and in English for specific purposes. The volume features examples from disciplinary genres not often covered in the existing literature, including MA theses, academic book reviews, and online student forums. Taken together with the study of learner corpora, the book demonstrates the impact of corpus linguistic tools in better understanding linguistic patterns of specific languages and language use and in turn, their role in helping to identify the needs of language learners. The book will be of interest to students and scholars in corpus linguistics, applied linguistics, and English for Specific Purposes.

Doing Discourse Analysis Jan 25 2020 "Providing both the practical steps for doing discourse analysis and the theoretical justifications for these steps, this book is for students and researchers undertaking discourse analysis."--BOOK JACKET.

Using Corpora in Discourse Analysis Nov 28 2022 Examines approaches to carrying out discourse analysis (DA) using techniques that are grounded in corpus linguistics. This book evaluates a variety of corpus-based methodologies including: collocations, keyness, concordances, dispersion plots, and building and annotating corpora.

Television Dialogue Jul 01 2020 This book explores a virtually untapped, yet fascinating research area: television dialogue. It reports on a study comparing the language of the American situation comedy *Friends* to natural conversation. Transcripts of the television show and the American English conversation portion of the Longman Grammar Corpus provide the data for this corpus-based investigation, which combines Douglas Biber's multidimensional methodology with a frequency-based analysis of close to 100 linguistic features. As a natural offshoot of the research design, this study offers a comprehensive description of the most common linguistic features characterizing natural conversation. Illustrated with numerous dialogue extracts from *Friends* and conversation, topics such as vague, emotional, and informal language are discussed. This book will be an important resource not only for researchers and students specializing in discourse analysis, register variation, and corpus linguistics, but also anyone interested in conversational language and television dialogue.

Discourse Patterns in Spoken and Written Corpora Jan 19 2022 This book brings together a number of empirical studies that use corpora to study discourse patterns in speech and writing. It explores

new trends in the area of text and discourse characterized by the alliance between text linguistics and areas such as corpus linguistics, genre analysis, literary stylistics and cross-linguistic studies. The contributions to the volume show how established corpora can be used to ask a number of new questions about the interface between speech and writing, the relation between grammar and discourse, academic discourse, cohesive markers, stylistic devices such as metaphor, deixis and non-verbal communication. The corpora used for text-analysis can also be tailor-made for the study of particular genres such as journal article abstracts, lectures, e-mailing list messages, headlines and titles. A recent development is to bring in contrastive data from bilingual corpora to show what is language-specific in the organization of the text.

English Discourse Particles May 30 2020 There are few aspects of language which are more problematic than its discourse particles. The present study of discourse particles draws upon data from the London-Lund Corpus to show how the methods and tools of corpora can sharpen their description. The first part of the book provides a picture of the state of the art in discourse particle studies and introduces the theory and methodology for the analysis in the second part of the book. Discourse particles are analysed as elements which have been grammaticalised and as a result have certain properties and uses. The importance of linguistic and contextual cues such as text type, position in the discourse, prosody and collocation for analysing discourse particles is illustrated. The following chapters deal with specific discourse particles ("now," "oh, just, sort of, and that sort of thing, actually") on the basis of their empirical analysis in the London-Lund Corpus. Examples and extended extracts from many different text types are provided to illustrate what discourse particles are doing in discourse.

Advances in Discourse Studies Nov 04 2020 Methods of approaching the study of discourse have developed rapidly in the last ten years, influenced by a growing interdisciplinary spirit among linguistics and anthropology, sociology, cognitive and cultural psychology and cultural studies, as well as among established sub-fields within linguistics itself. Among the more recent developments are an increasing 'critical' turn in discourse analysis, a growing interest in historical, ethnographic and corpus-based approaches to discourse, more concern with the social contexts in which discourse occurs, the social actions that it is used to take and the identities that are constructed through it, as well as a reevaluation of what counts as 'discourse' to include multi-modal texts and interaction. *Advances in Discourse Studies* brings together contributions from leading scholars in the field, investigating the historical and theoretical relationships between new advances in discourse studies and pointing towards new directions for the future of the discipline. Featuring discussion questions, classroom projects and recommended readings at the end of each section, as well as case studies illustrating each approach discussed, this is an invaluable resource for students of interdisciplinary discourse analysis.

Corpus and Context Mar 21 2022 *Corpus and Context* explores the

relationship between corpus linguistics and pragmatics by discussing possible frameworks for analysing utterance function on the basis of spoken corpora. The book articulates the challenges and opportunities associated with a change of focus in corpus research, from lexical to functional units, from concordance lines to extended stretches of discourse, and from the purely textual to multi-modal analysis of spoken corpus data. Drawing on a number of spoken corpora including the five million word Cambridge and Nottingham Corpus of Discourse in English (CANCODE, funded by CUP (c)), a specific speech act function is being explored using different approaches and different levels of analysis. This involves a close analysis of contextual variables in relation to lexico-grammatical and discoursal patterns that emerge from the corpus data, as well as a wider discussion of the role of context in spoken corpus research.

Corpora: Pragmatics and Discourse Aug 14 2021 This volume presents current state-of-the-art discussions in corpus-based linguistic research of the English language. The papers deal with Present-day English, worldwide varieties of English and the history of the English language. A special focus of the volume are studies in the broad field of corpus pragmatics and corpus-based discourse analysis. It includes corpus-based studies of speech acts, conversational routines, referential expressions and thought styles, as well as studies on the lexis, grammar and semantics of English. And it also includes several studies on technical aspects of corpus compilation, fieldwork and parsing.

Contemporary Corpus Linguistics Apr 09 2021 Acts as a one-volume resource, providing an introduction to every aspect of corpus linguistics as it is being used at the moment.

The Corpus Linguistics Discourse Feb 26 2020 With an ever-growing body of corpus linguistic tools, resources and applications, it becomes increasingly important to reflect critically on the underlying assumptions that corpus linguistics is based on. Focusing on meaning and methods, this book tackles fundamental concepts and approaches that define the discourse of the field. Internationally renowned contributors address topics that range from the history of corpus linguistics to contrastive perspectives between languages, to interpreting patterns in corpora as evidence of both mainstream discourses and individual voices within them. This collection not only adds to our understanding of the fundamentals of corpus linguistics, it also brings innovative meanings to the corpus linguistics discourse. It has been edited in honour of Wolfgang Teubert, who for decades has been a significant voice in this discourse.

Corpus-based and Computational Approaches to Discourse Anaphora Oct 04 2020 Discourse anaphora is a challenging linguistic phenomenon that has given rise to research in fields as diverse as linguistics, computational linguistics and cognitive science. Because of the diversity of approaches these fields bring to the anaphora problem, the editors of this volume argue that there needs to be a synthesis, or at least a principled attempt to draw the differing strands of anaphora research together. The selected papers in this volume all contribute to the aim of synthesis and were selected to represent the growing

importance of corpus-based and computational approaches to anaphora description, and to developing natural language systems for resolving anaphora in natural language.

Text, Discourse and Corpora Jul 25 2022 Presenting theoretical positions in corpus linguistics, Text, Discourse, and Corpora provides an essential overview for advanced undergraduate, postgraduate and academic readers.

The Cambridge Handbook of English Corpus Linguistics Jun 23 2022 The Cambridge Handbook of English Corpus Linguistics (CHECL) surveys the breadth of corpus-based linguistic research on English, including chapters on collocations, phraseology, grammatical variation, historical change, and the description of registers and dialects. The most innovative aspects of the CHECL are its emphasis on critical discussion, its explicit evaluation of the state of the art in each sub-discipline, and the inclusion of empirical case studies. While each chapter includes a broad survey of previous research, the primary focus is on a detailed description of the most important corpus-based studies in this area, with discussion of what those studies found, and why they are important. Each chapter also includes a critical discussion of the corpus-based methods employed for research in this area, as well as an explicit summary of new findings and discoveries.

Using Corpora to Learn about Language and Discourse May 11 2021 Considerable progress has been made in the use of corpora for research purposes to describe language in use, and more recently, through a CADS (corpus assisted discourse studies) approach, to identify the discourse features of specific text genres. While the potential benefits of working with corpora in the classroom have been recognised, there has been a lag in the promulgation of guidelines for carrying out meaningful corpus work with language learners and teachers in mind. The papers in this volume aim to make a contribution toward filling that gap by providing an in-depth account of innovative corpus work, most of which has actually been carried out with real learners in the classroom. Authors provide valuable insights into ways of structuring corpus work for specific target learners, as well as suggestions for resolving problematic issues that have arisen

and avoiding errors that have been made with learners and in their own research and experimentation. The transparency and honesty with which they present their methodology and results, along with the successful techniques they have developed, constitute a step forward in defining good (and bad) practice in the use of corpora in learning. Corpus Approaches to Discourse Mar 28 2020 Corpus linguistics has now come of age and Corpus Approaches to Discourse equips students with the means to question, defend and refine the methodology. Looking at corpus linguistics in discourse research from a critical perspective, this volume is a call for greater reflexivity in the field. The chapters, each written by leading authorities, contain an overview of an emerging area and a case-study, presenting practical advice alongside theoretical reflection. Carefully structured with an introduction by the editors and a conclusion by leading researcher, Paul Baker, this is key reading for advanced students and researchers of corpus linguistics and discourse analysis.

Using Corpora in Discourse Analysis Dec 30 2022 Paul Baker examines approaches to carrying out discourse analysis using techniques that are grounded in corpus linguistics. He looks a number of methodologies including collocations, keyness, concordances and dispersion plots and illustrates them with real-life examples.

Trust the Text Apr 21 2022 John Sinclair is one of the major figures in applied linguistics and his work is essential study for students. This accessible book collects in one volume Sinclair's key papers on written discourse structure, lexis patterns, phraseology, corpus analysis, lexicography and linguistic theory from the 1990s. All the papers have been edited and updated for this book. The clear and accessible introduction helps students to navigate his key themes and arguments, making the volume an ideal companion for those coming to Sinclair's more recent writings for the first time.
