Human Evolution in China Apr 29 2020 In recent years, China has produced a wealth of hominid fossils that shed new light on the course of human evolution. This book--the first comprehensive treatment of these fossil finds--offers a brief description of Chinese paleoanthropology and documents all major Chinese sites. Original translations of Chinese-language materials and new analyses of numerous fossils are included. Each fossil description includes the fossil name and location of site; how, when, and by whom it was found; a detailed description; archaeological remains at the site; and floral and faunal content of the site. Students and researchers in human evolution, evolutionary biology, evolutionary anatomy, and archaeology will welcome this much-needed guide to a remarkable treasure trove of fossil remains.

Himalayan Gazetteer Oct 23 2019 The Himalayas have captivated the imagination and interest of humankind for centuries. The more we explore, the more we learn. India's rich history, society, and culture, are deeply influenced by the world's tallest mountain range. After all, before modern travel, the Himalayas were the most important gateway to India, for people, goods and ideas. This rare and invaluable record of the youngest mountain range in the world is back in print after a century. The extensively detailed information on every district, food habits, customs, influences, as well as the people and their vocations will provide a new perspective to a whole new generation of young readers. The aim of this publication is to make Atkinson's rich data accessible once again to researchers so that we can continue to refer to this rich source of information in our continued work to conserve the rich natural resources and ecological heritage of the Himalayas which stand frighteningly threatened by fast paced and largely unplanned development.

Framing Animals as Epidemic Villains Oct 16 2021 This book takes a historical and anthropological approach to understanding how non-human hosts and vectors of diseases are understood, at a time when emerging infectious diseases are one of the central concerns of global health. The volume critically examines the ways in which animals have come to be framed as 'epidemic villains' since the turn of the nineteenth century. Providing epistemological and social histories of non-human epidemic blame, as well as ethnographic perspectives on its recent

manifestations, the essays explore this cornerstone of modern epidemiology and public health alongside its continuing importance in today's world. Covering diverse regions, the book argues that framing animals as spreaders and reservoirs of infectious diseases – from plague to rabies to Ebola – is an integral aspect not only to scientific breakthroughs but also to the ideological and biopolitical apparatus of modern medicine. As the first book to consider the impact of the image of non-human disease hosts and vectors on medicine and public health, it offers a major contribution to our understanding of human-animal interaction under the shadow of global epidemic threat.

China In World History May 30 2020 A novel approach to Chinese history is adopted here, in that the theme of the book is China's relations with the non-Chinese world, not only political and economic, but cultural, social and technological as well. It seeks to show that China's history is part of everyone's history. In particular it traces China's relationship since the thirteenth century to the emergent world order and the various world institutions of which that order is composed. Each chapter discusses China's comparative place in the world, the avenues of contact between China and other civilizations, and who and what passed along these channels.
