From raters' evaluations and item analysis, 56 items were selected for cross validation with another 1000 raters. A high proportion of the selected items correlated positively with the OER ratings and about 60 percent of the raters favored adoption of the checklist concept. Why buy a book you can download for free? We print this book so you don't have to. First you gotta find a good clean (legible) copy and make sure it's the latest version (not always easy). Some documents found on the web are missing some pages or the image quality is so poor, they are difficult to read. We look over each document carefully and replace poor quality images by going back to the original source document. We proof each document to make sure it's all there - including all changes. This document presents human factors issues that should be considered in the design and evaluation of air traffic control (ATC) systems and subsystems. The checklist is a companion document to Human Factors in the Design and Evaluation of Air Traffic Control Systems. The goal of this checklist is to point air traffic controllers and other operations specialists to questions that they may wish to consider in their evaluation of new systems or subsystems, or a new component of an existing system. Some checklist items may be used as a rough filter for known design flaws; others are more appropriate for group discussion. The numbers in parenthesis at the end of each checklist item refer to the section in Human Factors in the Design and Evaluation of Air Traffic Control Systems that discusses the issue. This mapping allows the checklist user to learn about the basis for the item, why it is important, and the implications of compromise. Checklist items marked with an 'E' indicate items that must be assessed with equipment and/or by referring to the specifications documentation. As the old saying goes, "If you have no objective, any road will take your there." So it is with the audit checklist. The checklist is the primary tool for providing order to Quality Assurance audit activities. With a well-planned and well-defined checklist, success is achievable. Without a checklist, the auditor has a disjointed, disorganized activity and no place to document his or her failed efforts. A number of formal quality programs which include audits as one of their program elements require the audit to be performed using a checklist or procedures to document what the auditor reviewed and what he or she found. It is the intent of this paper to provide the reader with the some insight as to the value of the checklist; the varieties of checklists that can be constructed; the pitfalls of improper application; and the success that can be achieved when the checklist has been properly researched, developed, and deployed.
